|                     | Background: This gene is located within the region of chromosome 9p that harbors tumor          |
|                     | suppressor genes critical in carcinogenesis. It is an intronless gene which is downregulated in |
|                     | non-small-cell lung cancer and small-cell lung cancer cell lines, suggesting that it may play a |
|                     | role in lung tumorigenesis.   |
