| | ubiquitin/proteasome system. The ubiquitin-conjugating enzyme 7-interacting protein 5 (UIP5), |
|---------------------|--|
| | also designated U-box domain-containing protein 5 or RING finger protein 37, contains 1 RING- |
| | type zinc finger and 1 U-box domain. UIP5 has been shown to interact with UBCH7, an enzyme |
| | that mediates selective degradation of abnormal proteins. The gene encoding UIP5 maps to |
| | chromosome 20, which houses over 600 genes, some of which are associated with Creutzfeldt- |
| | Jakob disease, amyotrophic lateral sclerosis, spinal muscular atrophy, ring chromosome 20 |
| | epilepsy syndrome and Alagille syndrome. Additionally, chromosome 20 contains a region with |
| | numerous genes which are thought important for seminal production and may be potential |
| | targets for male contraception. |
