-			
Background:	Synonyms: NAP4, NCKAP4, Suppressor of cytokine signaling 7, SOCS-7, Nck, Ash and		
	phospholipase C gamma-binding protein, Nck-associated protein 4, NAP-4, SOCS7, SOCS6		
	Background: Regulates signaling cascades probably through protein ubiquitination and/or		
	sequestration. Functions in insulin signaling and glucose homeostasis through IRS1		
	ubiquitination and subsequent proteasomal degradation. Inhibits also prolactin, growth		
	hormone and leptin signaling by preventing STAT3 and STAT5 activation, sequestering them in		
	the cytoplasm and reducing their binding to DNA. May be a substrate recognition component of		
	a SCF-like E3 ubiquitin-protein ligase complex which mediates the ubiquitination and		
	subsequent proteasomal degradation of target proteins (By similarity).
