|---------------------|--|
| | phospholipase C gamma-binding protein, Nck-associated protein 4, NAP-4, SOCS7, SOCS6 |
| | Background: Regulates signaling cascades probably through protein ubiquitination and/or |
| | sequestration. Functions in insulin signaling and glucose homeostasis through IRS1 |
| | ubiquitination and subsequent proteasomal degradation. Inhibits also prolactin, growth |
| | hormone and leptin signaling by preventing STAT3 and STAT5 activation, sequestering them in |
| | the cytoplasm and reducing their binding to DNA. May be a substrate recognition component of |
| | a SCF-like E3 ubiquitin-protein ligase complex which mediates the ubiquitination and |
| | subsequent proteasomal degradation of target proteins (By similarity). |
