	containing protein 5, New ras effector 1, Regulator for cell adhesion and polarization enriched in
	lymphoid tissues, RASSF5
	Background: Potential tumor suppressor. Seems to be involved in lymphocyte adhesion by
	linking RAP1A activation upon T-cell receptor or chemokine stimulation to integrin activation.
	Isoform 2 stimulates lymphocyte polarization and the patch-like distribution of ITGAL/LFA-1,
	resulting in an enhanced adhesion to ICAM1. Together with RAP1A may participate in
	regulation of microtubule growth. The association of isoform 2 with activated RAP1A is
	required for directional movement of endothelial cells during wound healing. May be involved in
	regulation of Ras apoptotic function. The RASSF5-STK4/MST1 complex may mediate HRAS
	and KRAS induced apoptosis.
