Background:	Synonyms: AARE, ACPH, Acyl peptide hydrolase, Acylamino acid releasing enzyme,	
	Acylaminoacyl peptidase, APEH, APH, D3F15S2, D3S48E, DNF15S2, N acylaminoacyl peptide	
	hydrolase, OPH, Oxidized protein hydrolase, ACPH_HUMAN. Background: AARE (Acylamino-acid-releasing enzyme) is also known as Acyl-peptide hydrolase It catalyzes the hydrolysis of the terminal acetylated amino acid preferentially from small acetylated peptides. The acetyl amino acid formed by this hydrolase is further processed to acetate and a free amino acid by an aminoacylase. It can play an important role in destroying	
		oxidatively damaged proteins in living cells. Deletions of this gene locus corresponding to the
		protein are found in various types of carcinomas, including small cell lung carcinoma and renal
		cell carcinoma.
