Target Details

Alternative Name:	ACF1 (BAZ1A Products)		
Background:	Synonyms: BAZ1A, Acf1, ACF1, drosophila, homolog of antibody ATP dependent chromatin		
	remodelling protein, ATP utilizing chromatin assembly and remodeling factor 1, ATP-dependent		
	chromatin-remodeling protein, ATP-utilizing chromatin assembly and remodeling factor 1,		
	Baz1a, BAZ1A_HUMAN, Bromodomain adjacent to zinc finger domain 1A, Bromodomain		
	adjacent to zinc finger domain protein 1A, cbp146, CHRAC subunit ACF1, Gtl5.		
	Background: Component of the ACF complex, an ATP-dependent chromatin remodeling		
	complex, that regulates spacing of nucleosomes using ATP to generate evenly spaced		
	nucleosomes along the chromatin. The ATPase activity of the complex is regulated by the		
	length of flanking DNA. Also involved in facilitating the DNA replication process. BAZ1A is the		
	accessory, non-catalytic subunit of the complex which can enhance and direct the process		
	provided by the ATPase subunit, SMARCA5, probably through targeting pericentromeric		
	heterochromatin in late S phase. Moves end-positioned nucleosomes to a predominantly		
	central position. May have a role in nuclear receptor-mediated transcription		
	repression.Component of the histone-fold protein complex CHRAC complex which faciliates		
	nucleosome sliding by the ACF complex and enhances ACF-mediated chromatin assembly. The		
	C-terminal regions of both CHRAC1 and POLE1 are required for these functions.
