### Target Details

Background:	Synonyms: Acid phosphatase testicular, Testicular acid phosphatase, PPAT_HUMAN.
	Background: Acid phosphatases are enzymes capable of hydrolyzing orthophosphoric acid
	esters in an acid medium. This gene is upregulated by androgens and is down-regulated by
	estrogens in the prostate cancer cell line. ACPT dephosphorylates receptor tyrosine-protein
	kinase erbB-4 and inhibits the ligand-induced proteolytic cleavage. ACPT is predominantly
	expressed in testis but exhibits a lower level of expression in testicular cancer tissues than in
	normal tissues. ACPT has structural similarity to prostatic and lysosomal acid phosphatases.
	Alternatively spliced transcript variants have been described, but their biological validity has not
	been determined.
Gene ID:	93650
