Background:	Synonyms: BD-2, SAP1, DEFB2, DEFB4, HBD-2, DEFB-2, DEFB12, Beta-defensin 4A, Beta-
	defensin 2, Defensin, beta 2, Skin-antimicrobial peptide 1, DEFB4A
	Background: Beta-defensins (also designated BD, and hBD in human) are small cationic
	peptides with broad-spectrum antimicrobial activity. Produced in mucosal epithelia and
	neutrophils of several species, Beta-defensins are developmentally regulated. Human b-
	defensin 2 is locally regulated by inflammation and is the first member of the b-defensin family
	that is locally inducible by inflammation. The murine homolog of human b-defensin 2, which is
	called b-defensin 3, is present in the respiratory system and in low levels in the epithelial cells of
	the intestine and lung. The unique murine b-defensin 2 (Defb2) is not expressed in airways of
	untreated mice, but is upregulated in the airways by lipopolysaccharide and may contribute to
	host defense at the mucosal surface of the airways
