Datasheet for ABIN2810342 anti-BLM antibody (AA 1201-1417) (AbBy Fluor® 594)

-online.com antibodies

Overview

Quantity:	100 μL	
Target:	BLM	
Binding Specificity:	AA 1201-1417	
Reactivity:	Human	
Host:	Rabbit	
Clonality:	Polyclonal	
Conjugate:	This BLM antibody is conjugated to AbBy Fluor® 594	
Application:	Western Blotting (WB), Immunofluorescence (Cultured Cells) (IF (cc)), Immunofluorescence (Paraffin-embedded Sections) (IF (p))	

Product Details

Immunogen:	KLH conjugated synthetic peptide derived from human BLM/Blooms Syndrome Protein Blm
Isotype:	IgG
Predicted Reactivity:	Human,Mouse,Rat,Dog,Cow,Sheep,Pig,Horse
Purification:	Purified by Protein A.

Target Details

Target:	BLM	
Alternative Name:	BLM/Blooms Syndrome Protein Blm (BLM Products)	
Background:	Synonyms: BLM, BLM_HUMAN, Bloom Syndrome, Bloom syndrome protein, Bloom syndrome

RecQ helicase like, BS, DNA Helicase, DNA helicase RecQ like type 2, MGC126616, MGC131618, MGC131620, RECQ 2, RECQ like, RecQ like type 2, ReCQ protein like 3, RecQ Protein-like 3, RECQ-2, RECQ-Like, RecQ-like type 2, RECQ2, RECQL 2, RECQL 3, RECQL-2, RECQL-3, RECQL2, RECQ13, type 2. Background: Bloom?s syndrome is an autosomal recessive disorder characterized by pre- and post-natal growth deficiencies, sun sensitivity, immunodeficiency and a predisposition to various cancers. The gene responsible for Bloom?s syndrome, BLM, encodes a protein homologous to the RecQ helicase of E. coli and is mutated in most Bloom?s syndrome patients. One characteristic of Bloom?s syndrome is an increased frequency of sister chromatid exchange (SCE). BLM has been shown to unwind G4 DNA, and a failure of this function is thought to be responsible for the increased rate of SCE. BLM is known to be translocated to the nucleus, where its ATPase activity is stimulated by both single- and double-stranded DNA. Mutations in the yeast SGS1, a homolog of BLM, are known to cause mitotic hyperrecombination similiar to that observed in Bloom?s cells. 641 DNA Damage Repair IF(IHC-P) 1:50-200 IF(IHC-F) 1:50-200
RECQ-2, RECQ-Like, RecQ-like type 2, RECQ2, RECQL 2, RECQL 3, RECQL-2, RECQL-3, RECQL2, RECQL3, type 2. Background: Bloom?s syndrome is an autosomal recessive disorder characterized by pre- and post-natal growth deficiencies, sun sensitivity, immunodeficiency and a predisposition to various cancers.
