Background:	Synonyms: AAR2 splicing factor homolog S. cerevisiae, AAR2 splicing factor homolog,	
	bA234K24.2, CGI 23, DKFZp564N1363, protein AAR2 homolog,	
	Background: Representing about 2 % of human DNA, chromosome 20 consists of	
	approximately 63 million bases and 600 genes. Chromosome 20 contains a region with	
	numerous genes expressed in the epididymis, which are thought important for seminal	
	production, and some viewed as potential targets for male contraception. The PRNP gene	
	encoding the prion protein associated with spongiform encephalopathies, like Creutzfeldt-	
	Jakob disease, is found on chromosome 20. Amyotrophic lateral sclerosis, spinal muscular	
	atrophy, ring chromosome 20 epilepsy syndrome and Alagille syndrome are also associated	
	with chromosome 20. The C20orf4 gene product has been provisionally designated C20orf4	
	pending further characterization.
