CDH18 (CDH18 Products)

Target Details

Background:	Synonyms: CAD18_HUMAN, Cadherin 14, Cadherin14, Cadherin 18, Cadherin18, Cadherin 18,
	type 2, Cadherin-14, Cadherin-18, CDH14, CDH14L, CDH18, CDH24, EY CADHERIN.
	Background: The cadherins are a family of Ca2+-dependent adhesion molecules that function
	to mediate cell-cell binding events that are critical to the maintenance of cell structure and
	morphogenesis. EY-cadherin, also known as CDH18 (cadherin 18), CDH14 (cadherin 14),
	CDH24 or CDH14L, is a 790 amino acid single-pass type I membrane protein that contains five
	cadherin domains. One of several members of the cadherin superfamily, EY-cadherin functions
	as a type II classical cadherin that is expressed specifically in the central nervous system
	(CNS), where it plays a role in cell-cell binding events. Specifically, EY-cadherin is thought to be
	involved in axon guidance and outgrowth, as well as synaptic adhesion within the CNS. EY-
	cadherin contains a highly conserved C-terminal domain characteristic of all cadherins, but
	lacks the HAV cell adhesion sequence that is specific to type I cadherins. The gene encoding
	EY-cadherin is located within a region on chromosome five that is commonly deleted in
	carcinomas, implicating EY-cadherin as a potential tumor suppressor.
