Target Details

Background:	Synonyms: CLEC1, CLEC-1, C-type lectin domain family 1 member A, C-type lectin-like receptor	
	1, CLEC1A, UNQ569/PR01131	
	Background: This gene encodes a member of the C-type lectin/C-type lectin-like domain	
	(CTL/CTLD) superfamily. Members of this family share a common protein fold and have	
	diverse functions, such as cell adhesion, cell-cell signalling, glycoprotein turnover, and roles in	
	inflammation and immune response. The encoded protein may play a role in regulating	
	dendritic cell function. Alternative splice variants have been described but their biological nature	
	has not been determined. This gene is closely linked to other CTL/CTLD superfamily members	
	on chromosome 12p13 in the natural killer gene complex region. [provided by RefSeq]
