Alternative Name:	COQ10B (COQ10B Products)		
Background:	Synonyms: Coenzyme Q10, Coenzyme Q10 B, Coenzyme Q10 homolog B, Coenzyme Q10B,		
	CQ10B_HUMAN.		
	Background: COQ10B, Coenzyme Q10, is a 247 amino acid protein encoded by the human gene		
	COQ10B. COQ10B is a mitochondrial protein that belongs to the COQ10 family. COQ10B is an		
	essential biological cofactor which increases brain mitochondrial concentration and exerts		
	neuroprotective effects. Plasma COQ10B levels decrease in patients with advanced chronic		
	heart failure (CHF) while COQ10B levels in hyperthyroid patients are found among the lowest		
	detected in human diseases. Likewise, COQ10B is elevated in hypothyroid subjects, also in		
	subclinical conditions, suggesting the usefulness of this index in assessing metabolic status in		
	thyroid disorders. It is believed that secretion of adrenal hormones is in some way related to		
	COQ10B levels, both in augmented and reduced conditions. However, since thyroid hormones		
	have an important role in modulating COQ10B levels and metabolism, when coexistent, thyroid		
	deficiency seems to play a prevalent role in comparison with adrenal deficiency.
