	UBE2V 2, UBE2V2, Ubiquitin conjugating enzyme E2 variant 2, Ubiquitin conjugating enzyme E2v2, Ubiquitin-conjugating enzyme E2 variant 2, UEV 2, UEV2, Vitamin D3 inducible protein, Vitamin D3-inducible protein. Background: Has no ubiquitin ligase activity on its own. The UBE2V2/UBE2N heterodimer catalyzes the synthesis of non-canonical poly-ubiquitin chains that are linked through 'Lys-63'. This type of poly-ubiquitination does not lead to protein degradation by the proteasome. Mediates transcriptional activation of target genes. Plays a role in the control of progress through the cell cycle and differentiation. Plays a role in the error-free DNA repair pathway and
	contributes to the survival of cells after DNA damage.
