	factor Tel 2, TREF.ETV7_HUMAN	
	Background: The protein encoded by this gene belongs to the ETS family of transcription	
	factors, which is a large group of evolutionarily conserved transcriptional regulators that play an	
	important role in a variety of cellular processes throughout development and differentiation,	
	and are involved in oncogenesis as well. This protein is predominantly expressed in	
	hematopoietic tissues. Several alternatively spliced transcript variants encoding different	
	isoforms have been described for this gene (PMID:11108721).[provided by RefSeq, May 2011].
