	Fanconi anemia complementation group E, Fanconi anemia group E protein, Protein FACE, RGD1561045.
	Background: The Fanconi anemia complementation group (FANC) currently includes FANCA,
	FANCB, FANCC, FANCD1 (also called BRCA2), FANCD2, FANCE, FANCF, FANCG, FANCI, FANCJ
	(also called BRIP1), FANCL, FANCM and FANCN (also called PALB2). The previously defined
	group FANCH is the same as FANCA. Fanconi anemia is a genetically heterogeneous recessive
	disorder characterized by cytogenetic instability, hypersensitivity to DNA crosslinking agents,
	increased chromosomal breakage, and defective DNA repair. The members of the Fanconi
	anemia complementation group do not share sequence similarity, they are related by their
	assembly into a common nuclear protein complex. This gene encodes the protein for
	complementation group E. [provided by RefSeq, Jul 2008].
