Target Details

Background:	Synonyms: F box and leucine rich repeat protein 4, F box protein FBL4/FBL5, F box/LRR repeat	
	protein 4, F-box and leucine-rich repeat protein 4, F-box protein FBL 4, F-box protein FBL4/FBL5,	
	F-box/LRR-repeat protein 4, FBL 4, FBL 5, FBL4, FBL5, Fbxl4, FBXL4_HUMAN.	
	Background: This gene encodes a member of the F-box protein family which is characterized by	
	an approximately 40 amino acid motif, the F-box. The F-box proteins constitute one of the four	
	subunits of ubiquitin protein ligase complex called SCFs (SKP1-cullin-F-box), which function in	
	phosphorylation-dependent ubiquitination. The F-box proteins are divided into 3 classes: Fbws	
	containing WD-40 domains, Fbls containing leucine-rich repeats, and Fbxs containing either	
	different protein-protein interaction modules or no recognizable motifs. The protein encoded by	
	this gene belongs to the Fbls class and, in addition to an F-box, contains at least 9 tandem	
	leucine-rich repeats. [provided by RefSeq, Jul 2008].
