Alternative Name:	IL-28R (IL28RA Products)		
Background:	Synonyms: IFNLR, LICR2, IL28RA, CRF2/12, IL-28R1, Interferon lambda receptor 1, IFN-lambda		
	receptor 1, IFN-lambda-R1, Cytokine receptor class-II member 12, Cytokine receptor family 2		
	member 12, CRF2-12, Interleukin-28 receptor subunit alpha, IL-28 receptor subunit alpha, IL-		
	28R-alpha, IL-28RA, Likely interleukin or cytokine receptor 2, IFNLR1		
	Background: The IFNLR1/IL10RB dimer is a receptor for the cytokine ligands IFNL2 and IFNL3		
	and mediates their antiviral activity. The ligand/receptor complex stimulate the activation of the		
	JAK/STAT signaling pathway leading to the expression of IFN-stimulated genes (ISG), which		
	contribute to the antiviral state. Determines the cell type specificity of the lambda interferon		
	action. Shows a more restricted pattern of expression in the epithelial tissues thereby limiting		
	responses to lambda interferons primarily to epithelial cells of the respiratory, gastrointestinal,		
	and reproductive tracts. Seems not to be essential for early virus-activated host defense in		
	vaginal infection, but plays an important role in Toll-like receptor (TLR)-induced antiviral		
	defense. Plays a significant role in the antiviral immune defense in the intestinal epithelium.
