	Background: The steady state of protein tyrosyl phosphorylation in cells is regulated by the	
	opposing action of tyrosine kinases and protein tyrosine phosphatases (PTPs). Several groups	
	have independently identified a non transmembrane PTP, designated SHPTP1 (also known as	
	PTP1C, HCP and SHP), which is primarily expressed in hematopoietic cells and characterized	
	by the presence of two SH2 domains N terminal to the PTP domain. A second and much more	
	widely expressed PTP with SH2 domains, SHPTP2 (also designated PTP1D and Syp), has been	
	identified. SHP2 is a protein tyrosine phosphatase that is widely expressed and plays a	
	regulatory role in various cell signaling events that are important for many cell functions, such	
	as mitogenic activation, metabolic control, transcription regulation, and cell migration.
