

Datasheet for ABIN2814859 anti-ISR-beta antibody (AA 1001-1100) (AbBy Fluor® 594)

Overview

Quantity:	100 µL
Target:	ISR-beta
Binding Specificity:	AA 1001-1100
Reactivity:	Human, Rat
Host:	Rabbit
Clonality:	Polyclonal
Conjugate:	This ISR-beta antibody is conjugated to AbBy Fluor® 594
Application:	Western Blotting (WB), Flow Cytometry (FACS), Immunofluorescence (Cultured Cells) (IF (cc)), Immunofluorescence (Paraffin-embedded Sections) (IF (p))

Product Details

Immunogen:	KLH conjugated synthetic peptide derived from human IR beta
lsotype:	lgG
Cross-Reactivity:	Human, Rat
Predicted Reactivity:	Mouse
Purification:	Purified by Protein A.
Target Details	

Target:	ISR-beta
Alternative Name:	Insulin Receptor Beta (ISR-beta Products)

Target Details	
Background:	Synonyms: CD 220, CD220, CD220 antigen, HHF 5, HHF5, HIR B, INSR, INSR, Insulin receptor,
	Insulin receptor subunit beta, IR, INSR_HUMAN.
	Background: The human insulin receptor is a heterotetrameric membrane glycoprotein
	consisting of disulfide linked subunits in a beta-alpha-alpha-beta configuration. The beta
	subunit (95 kDa) possesses a single transmembrane domain, whereas the alpha subunit (135
	kDa) is completely extracellular. The insulin receptor exhibits receptor tyrosine kinase (RTK)
	activity. RTKs are single pass transmembrane receptors that possess intrinsic cytoplasmic
	enzymatic activity, catalyzing the transfer of the gamma phosphate of ATP to tyrosine residues
	in protein substrates. RTKs are essential components of signal transduction pathways that
	affect cell proliferation, differentiation, migration and metabolism.Included in this large protein
	family are the insulin receptor and the receptors for growth factors such as epidermal growth
	factor, fibroblast growth factor and vascular endothelial growth factor. Receptor activation
	occurs through ligand binding, which facilitates receptor dimerization and autophosphorylation
	of specific tyrosine residues in the cytoplasmic portion. The interaction of insulin with the alpha
	subunit of the insulin receptor activates the protein tyrosine kinase of the beta subunit, which
	then undergoes an autophosphorylation that increases its tyrosine kinase activity. Three
	adapter proteins, IRS1, IRS2 and Shc, become phosphorylated on tyrosine residues following
	insulin receptor activation. These three phosphorylated proteins then interact with SH2 domain
	containing signaling proteins.
Gene ID:	3643
UniProt:	P06213
Application Details	
Application Notes:	FCM 1:20-100
	IF(IHC-P) 1:50-200
	IF(IHC-F) 1:50-200
	IF(ICC) 1:50-200
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Concentration:	1 μg/μL
Buffer:	Aqueous buffered solution containing 0.01M TBS (pH 7.4) with 1 % BSA, 0.03 % Proclin300 and

Handling

	50 % Glycerol.
Preservative:	ProClin
Precaution of Use:	This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be handled by trained staff only.
Storage:	-20 °C
Storage Comment:	Store at -20°C. Aliquot into multiple vials to avoid repeated freeze-thaw cycles.
Expiry Date:	12 months
