Datasheet for ABIN2851382 MUC1 ELISA Kit

Image

#### Overview

| Quantity:                | 96 tests               |
|--------------------------|------------------------|
| Target:                  | MUC1                   |
| Reactivity:              | Cow                    |
| Method Type:             | Sandwich ELISA         |
| Detection Range:         | 0.312 ng/mL - 20 ng/mL |
| Minimum Detection Limit: | 0.312 ng/mL            |
| Application:             | ELISA                  |

## Product Details

| Purpose:                    | The kit is a sandwich enzyme immunoassay for the in vitro quantitative measurement of MUC1 in bovine tissue homogenates, cell lysates and other biological fluids.  |
|-----------------------------|---|
| Sample Type:                | Cell Lysate, Tissue Homogenate  |
| Analytical Method:          | Quantitative  |
| Detection Method:           | Colorimetric  |
| Specificity:                | This assay has high sensitivity and excellent specificity for detection of this index.  |
| Cross-Reactivity (Details): | No significant cross-reactivity or interference between this index and analogues was observed.<br>Note: Limited by current skills and knowledge, it is impossible for us to complete the cross-<br>reactivity detection between this index and all the analogues, therefore, cross reaction may still<br>exist. |
| Sensitivity:                | 0.098 ng/mL   |

## Product Details

| Components:            | Pre-coated, ready to use 96-well strip plate                       |
|------------------------|--|
|                        | Standard (freeze dried)  |
|                        | Standard Diluent   |
|                        | Detection Reagent A  |
|                        | Detection Reagent B  |
|                        | Assay Diluent A  |
|                        | Assay Diluent B  |
|                        | • TMB  |
|                        | Stop Solution  |
|                        | • Wash Buffer (30X)  |
|                        | Plate sealer for 96 wells  |
|                        | Instruction manual   |
| Material not included: | 1. Microplate reader with 450 ± 10nm filter.                       |
|                        | 2. Precision single or multi-channel pipettes and disposable tips. |
|                        | 3. Eppendorf Tubes for diluting samples.                           |
|                        | 4. Deionized or distilled water.                                   |
|                        | 5. Absorbent paper for blotting the microtiter plate.              |
|                        | 6. Container for Wash Solution.                                    |
|                        |  |

# Target Details

| Target:           | MUC1   |  |
|-------------------|--|--|
| Alternative Name: | MUC1 (MUC1 Products)   |  |
| Background:       | Alternative name: CD227, EMA, H23AG, KL-6, PEM, PEMT, PUM, CA15-3, Cancer antigen 15-3,<br>Carcinoma-associated mucin, Episialin, Peanut-reactive urinary mucin, Polymorphic epithelial<br>mucin |  |
| Gene ID:          | 281333   |  |
| UniProt:          | Q8WML4   |  |
| Pathways:         | Negative Regulation of intrinsic apoptotic Signaling   |  |

# Application Details

| Sample Volume: | 100 μL   |
|----------------|--|
| Assay Time:    | 1 - 4.5 h                                      |
| Plate:         | Pre-coated                                     |
| Protocol:      | 1. Prepare all reagents, samples and standards |

| Application Details | App | lication | Detai | ls |
|---------------------|-----|----------|-------|----|
|---------------------|-----|----------|-------|----|

|                    | 2. Add 100 $\mu$ L standard or sample to each well. Incubate 2 hours at 37°C   |
|--------------------|--|
|                    | 3. Aspirate and add 100µL prepared Detection Reagent A. Incubate 1 hour at 37°C  |
|                    | 4. Aspirate and wash 3 times   |
|                    | 5. Add 100µL prepared Detection Reagent B. Incubate 1 hour at 37°C   |
|                    | 6. Aspirate and wash 5 times   |
|                    | 7. Add 90µL Substrate Solution. Incubate 15-25 minutes at 37°C   |
|                    | 8. Add 50µL Stop Solution. Read at 450nm immediately.  |
| Assay Procedure:   | The microtiter plate provided in this kit has been pre-coated with an antibody specific to the   |
|                    | index. Standards or samples are then added to the appropriate microtiter plate wells with a  |
|                    | biotin-conjugated antibody preparation specific to the index. Next, Avidin conjugated to   |
|                    | Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB   |
|                    | substrate solution is added, only those wells that contain the index, biotin-conjugated antibody   |
|                    | and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is  |
|                    | terminated by the addition of sulphuric acid solution and the color change is measured   |
|                    | spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of the index in  |
|                    | the samples is then determined by comparing the O.D. of the samples to the standard curve.   |
| Assay Precision:   | • Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level the index were tested 20 times on one plate, respectively.                                    |
|                    | <ul> <li>Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level<br/>the index were tested on 3 different plates, 8 replicates in each plate.</li> </ul> |
|                    | • CV(%) = SD/meanX100  |
|                    | Intra-assay: CV&lt10%  |
|                    | Inter-assay: CV&lt12%  |
| Restrictions:      | For Research Use only  |
| Handling           |  |
| Precaution of Use: | The Stop Solution suggested for use with this kit is an acid solution. Wear eye, hand, face, and   |
|                    | clothing protection when using this material.  |
| Handling Advice:   | The stability of ELISA kit is determined by the loss rate of activity. The loss rate of this kit is les  |
|                    | than 5 % within the expiration date under appropriate storage conditions. Note: To minimize  |
|                    | unnecessary influences on the performance, operation procedures and lab conditions,  |
|                    | especially room temperature, air humidity and incubator temperatures should be strictly  |
|                    | regulated. It is also strongly suggested that the whole assay is performed by the same   |
|                    | experimenter from the beginning to the end.  |

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 3/4 | Product datasheet for ABIN2851382 | 09/11/2023 | Copyright antibodies-online. ## Handling

| Storage:         | 4 °C,-20 °C  |
|------------------|--|
| Storage Comment: | The Assay Plate, Standard, Detection Reagent A and Detection Reagent B should be stored at -     |
|                  | 20°C upon being received. After receiving the kit , Substrate should be always stored at         |
|                  | 4°C.Other reagents are kept according to the labels on vials. But for long term storage, please  |
|                  | keep the whole kit at -20°C. The unused strips should be kept in a sealed bag with the desiccant |
|                  | provided to minimize exposure to damp air. The test kit may be used throughout the expiration    |
|                  | date of the kit (six months from the date of manufacture). Opened test kits will remain stable   |
|                  | until the expiring date shown, provided it is stored as prescribed above.                        |

Expiry Date:

12 months
