	AD102 (AD102 Droducto)
Alternative Name:	AP1S2 (AP1S2 Products)
Background:	Adaptor protein complex 1 is found at the cytoplasmic face of coated vesicles located at the
	Golgi complex, where it mediates both the recruitment of clathrin to the membrane and the
	recognition of sorting signals within the cytosolic tails of transmembrane receptors. This
	complex is a heterotetramer composed of two large, one medium, and one small adaptin
	subunit. The protein encoded by this gene serves as the small subunit of this complex and is a member of the adaptin protein family. Transcript variants utilizing alternative polyadenylation
	signals exist for this gene.
	signals exist for this gene.
	Cellular Localization: Golgi apparatus , Cytoplasmic vesicle membrane , Membrane , clathrin-
	coated pit
Molecular Weight:	19 kDa
Gene ID:	8905
