### Target Details

|                             | acts as a human chaperone Antibody. It is thought to play an important role in Antibody folding |
|-----------------------------|---|
|                             | and secretion in the ER. Suppression of the Antibody is associated with accelerated apoptosis,  |
|                             | therefore having an important cryoprotective role in hypoxia-induced cellular pertubation. This |
|                             | cryopotective role has led to an anti-tumor immune response, which will hopefully lead to       |
|                             | therapeutic immunizations against cancers (1). GRP170 has also been shown to bind with          |
|                             | dendritic cells and provide the danger signals to induce anti-tumor immune responses (2).       |
