

Datasheet for ABIN2871242 Urocortin CLIA Kit

Overview Quantity: 96 tests Urocortin (UCN) Target: Reactivity: Rat Method Type: Competition ELISA Application: ELISA **Product Details** Analytical Method: Quantitative Detection Method: Chemiluminescent **Target Details** Urocortin (UCN) Target: Alternative Name: Urocortin (UCN Products) Positive Regulation of Peptide Hormone Secretion, Hormone Activity, Negative Regulation of Pathways: Hormone Secretion, cAMP Metabolic Process, Regulation of Cell Size, Feeding Behaviour **Application Details**

Application Notes:	Optimal working dilution should be determined by the investigator.
Plate:	Pre-coated
Protocol:	The immunoplate in this kit is pre-coated with secondary antibody and the nonspecific binding
	sites are blocked. The secondary antibody can bind to the Fc fragment of the primary antibody

Application Details

	(peptide antibody) whose Fab fragment will be competitively bound by both biotinylated peptide
	and peptide standard or targeted peptide in samples. The biotinylated peptide interacts with
	streptavidin-horseradish peroxidase (SA-HRP) which catalyzes the substrate solution. The
	luminescence intensity is directly proportional to the amount of biotinylated peptide-SA-HRP
	complex but inversely proportional to the amount of the peptide in standard solutions or
	samples. This is due to the competitive binding of the biotinylated peptide with the standard
	peptide or samples to the peptide antibody (primary antibody). A standard curve of known
	concentration can be established accordingly. The unknown concentration in samples can be
	determined by extrapolation to this standard curve.
