

## Datasheet for ABIN2871316 **AP36 CLIA Kit**

[Go to Product page](#)

### Overview

Quantity: 96 tests

Target: AP36

Reactivity: Rat, Mouse

Method Type: Competition ELISA

Application: ELISA

### Product Details

Analytical Method: Quantitative

Detection Method: Chemiluminescent

### Target Details

Target: AP36

Alternative Name: Apelin-36 ([AP36 Products](#))

### Application Details

Application Notes: Optimal working dilution should be determined by the investigator.

Plate: Pre-coated

Protocol: The immunoplate in this kit is pre-coated with secondary antibody and the nonspecific binding sites are blocked. The secondary antibody can bind to the Fc fragment of the primary antibody (peptide antibody) whose Fab fragment will be competitively bound by both biotinylated peptide and peptide standard or targeted peptide in samples. The biotinylated peptide interacts with

## Application Details

---

streptavidin-horseradish peroxidase (SA-HRP) which catalyzes the substrate solution. The luminescence intensity is directly proportional to the amount of biotinylated peptide-SA-HRP complex but inversely proportional to the amount of the peptide in standard solutions or samples. This is due to the competitive binding of the biotinylated peptide with the standard peptide or samples to the peptide antibody (primary antibody). A standard curve of known concentration can be established accordingly. The unknown concentration in samples can be determined by extrapolation to this standard curve.

---

Restrictions: For Research Use only

## Handling

---

Storage: 4 °C
