Target Details		
Alternative Name:	CD39 (ENTPD1 Products)	
Background:	Ectonucleoside triphosphate diphosphohydrolase 1,CD39, also known as ectonucleoside triphosphate diphosphohydrolase 1 (ENTPD1), is a cell surface enzyme (with intracellular N-	
	and C-terminus) which hydrolyzes extracellular ATP and ADP to AMP. Inhibition of its enzymatic	
	activity may confer anticancer benefits. The formation of oligomers in the plasma membrane is	
	essential for enzyme activity. It is expressed on Treg cells, and in other cell types, such as	
	mantle zone B cells, activated T cells, NK cells, macrophages, dendritic cells, neurons,	
	endothelial cells and platelets. Hydrolysis of ATP and ADP inhibits inflammatory and thrombotic	
	responses. In the nervous system, it regulates purinergic neurotransmission.,ETDH1, LCAA,	
	Ecto-ATPase 1, Ecto-apyrase, ENTPD1
