

Datasheet for ABIN3026664 Mouse anti-Human IgM Heavy Chain Antibody

4 Images

Overview

Quantity:	100 µg
Target:	IgM Heavy Chain
Reactivity:	Human
Host:	Mouse
Clonality:	Monoclonal
Application:	Immunohistochemistry (Paraffin-embedded Sections) (IHC (p)), Western Blotting (WB), Flow Cytometry (FACS), Immunofluorescence (IF)

Product Details

Immunogen:	Recombinant heavy chain of human IgM was used as the immunogen for this antibody.
Clone:	IM373
Isotype:	IgG1 kappa
Characteristics:	This antibody recognizes a protein of 75 kDa, identified as the mu heavy chain of human immunoglobulins. It does not cross-react with alpha (IgA), gamma (IgG), epsilon (IgE), or delta
	(IgD), heavy chains, T-cells, monocytes, granulocytes, or erythrocytes. The antibody is useful in
	the identification of leukemias, plasmacytomas, and certain non-Hodgkin's lymphomas. The
	most common feature of these malignancies is the restricted expression of a single heavy
	chain class. Demonstration of clonality in lymphoid infiltrates indicates that the infiltrate is
	clonal and therefore malignant.
Purification:	Protein G affinity chromatography

Target Details		
Target:	IgM Heavy Chain	
Background:	This antibody recognizes a protein of 75 kDa, identified as the mu heavy chain of human immunoglobulins. It does not cross-react with alpha (IgA), gamma (IgG), epsilon (IgE), or delta (IgD), heavy chains, T-cells, monocytes, granulocytes, or erythrocytes. The antibody is useful in the identification of leukemias, plasmacytomas, and certain non-Hodgkin's lymphomas. The most common feature of these malignancies is the restricted expression of a single heavy chain class. Demonstration of clonality in lymphoid infiltrates indicates that the infiltrate is clonal and therefore malignant.	
Gene ID:	3507	
Application Details		
Application Notes:	 The concentration stated for each application is a general starting point. Variations in protocols, secondaries and substrates may require the antibody to be titered up or down for optimal performance. 1. Staining of formalin-fixed tissues requires boiling tissue sections in 10 mM citrate buffer, pH 6.0, for 10-20 min followed by cooling at RT for 20 minutes. 2. The prediluted format is supplied in a dropper bottle and is optimized for use in IHC. After epitope retrieval step (if required), drip mAb solution onto the tissue section and incubate at RT for 30 min.\. FACS: 0.5-1 µg/million cells,IF: 0.5-1 µg/mL,WB: 0.5-1 µg/mL,IHC (FFPE): 0.5-1 µ g/mL for 30 minutes at RT (1),Prediluted format : incubate for 30 min at RT (2) 	
Restrictions:	For Research Use only	
Handling		
Concentration:	0.2 mg/mL	
Buffer:	0.2 mg/mL in 1X PBS with 0.1 mg/mL BSA (US sourced) and 0.05 % sodium azide	
Preservative:	Sodium azide	
Precaution of Use:	This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.	
Storage:	4 °C,-20 °C	
Storage Comment:	Store the IgM heavy chain antibody at 2-8°C (with azide) or aliquot and store at -20°C or colder (without azide).
