Product Details

Isotype:	lgG
Cross-Reactivity:	Chicken, Human, Mouse, Rat
Characteristics:	Ceh-10 homeodomain-containing homolog,Chx10 is a 46 kDa homeodomain protein of the
	paired-like class that is essential for development of the mammalian eye. Mutations in Chx10
	cause microphthalmia, a cause of congenital blindness in humans, and the ocular retardation
	(or) phenotype in mice. In the developing mouse retina Chx10 is expressed in retinal
	progenitors, while in the mature retina, Chx10 expression becomes restricted to bipolar
	neurons. Concurrent with these expression patterns, the Chx10-/- (or) retina is thin due to a
	defect in proliferation of retinal progenitors, and lacks bipolar neurons. Chx10 is also expressed
	in the developing brainstem, thalamus, and spinal cord.
Purification:	Ammonium Sulfate Precipitation
