

Datasheet for ABIN306873
anti-KCNA5 antibody

[Go to Product page](#)

1 Image

Overview

Quantity:	100 µg
Target:	KCNA5
Reactivity:	Rat
Host:	Rabbit
Clonality:	Polyclonal
Conjugate:	This KCNA5 antibody is un-conjugated
Application:	Western Blotting (WB)

Product Details

Immunogen:	Rabbits were immunized with a synthetic peptide derived from the rat Kv1.5 potassium channel conjugated to KLH
Isotype:	IgG
Cross-Reactivity:	Human, Mouse, Rat
Characteristics:	Voltage-Gated Potassium Channel, Kv1.5 isoform, The Kv1.5 potassium channel is a voltage-gated channel protein which belongs to the delayed rectifier class and to the Shaker potassium channel subfamily which includes Kv1.1, Kv1.2, Kv1.3 and Kv1.4. Potassium channels are mainly found in plasma membranes but are not generally distributed over the cell surface. Potassium channels catalyze the rapid permeation of potassium ions while rejecting biologically abundant potential competitors such as sodium, calcium and magnesium. Ion selectivity and high throughput rate of potassium channels is accomplished by precise coordination of dehydrated potassium by the protein and multiple ion occupancy within the permeation pathway. All potassium channels carry out the formation of a transmembrane leak

Product Details

specific for potassium ions. Since cells almost universally maintain cytoplasmic potassium concentrations higher than those extracellularly, the opening of a potassium channel implies a negative ongoing change in electrical voltage across the cell membrane. This may result in termination of the action potential of electrically excitable cells including nerve, muscle and pancreatic beta cells. In nonexcitable cells, potassium channels play important roles in the cellular potassium recycling required for electrolyte balance effected by the renal epithelium.

Purification: Ammonium Sulfate Precipitation

Target Details

Target: KCNA5

Alternative Name: Kv1.5 Potassium Channel ([KCNA5 Products](#))

UniProt: [P22460](#)

Application Details

Application Notes: This antibody can be used for Western blotting (5-10 µg/mL). Optimal concentration should be evaluated by serial dilutions.

Restrictions: For Research Use only

Handling

Buffer: Provided as solution in phosphate buffered saline with 0.08 % sodium azide

Preservative: Sodium azide

Precaution of Use: This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.

Storage: -20 °C

Storage Comment: Product should be stored at -20°C. Aliquot to avoid freeze/thaw cycles

Western Blotting

Image 1. Western blot analysis using Kv1.5 antibody on rat brain lysate.
