antibodies

Datasheet for ABIN3074554 TRIM35 Protein (AA 1-493) (Strep Tag)

Overview

Quantity:	1 mg
Target:	TRIM35
Protein Characteristics:	AA 1-493
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This TRIM35 protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

Product Details

Sequence:	MERSPDVSPG PSRSFKEELL CAVCYDPFRD AVTLRCGHNF CRGCVSRCWE VQVSPTCPVC
	KDRASPADLR TNHTLNNLVE KLLREEAEGA RWTSYRFSRV CRLHRGQLSL FCLEDKELLC

	VLAIPRRLRV ELECEEGELS FYDAERHCHL YTFHARFGEV RPYFYLGGAR GAGPPEPLRI
	CPLHISVKEE LDG
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.

Product Details

Characteristics:

Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALICE® and purified by multi-step, protein-specific process to ensure correct folding and modification.
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):

- 1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
- 2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and

	Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade
Target Details	
Target:	TRIM35
Alternative Name:	TRIM35 (TRIM35 Products)
Background:	E3 ubiquitin-protein ligase TRIM35 (EC 2.3.2.27) (Hemopoietic lineage switch protein
	5),FUNCTION: E3 ubiquitin-protein ligase that participates in multiple biological processes
	including cell death, glucose metabolism, and in particular, the innate immune response.
	Mediates 'Lys-63'-linked polyubiquitination of TRAF3 thereby promoting type I interferon
	production via RIG-I signaling pathway (PubMed:32562145). Can also catalyze 'Lys-48'-linked
	polyubiquitination and proteasomal degradation of viral proteins such as influenza virus PB2
	(PubMed:32562145). Acts as a negative feedback regulator of TLR7- and TLR9-triggered
	signaling. Mechanistically, promotes the 'Lys-48'-linked ubiquitination of IRF7 and induces its
	degradation via a proteasome-dependent pathway (PubMed:25907537). Reduces FGFR1-
	dependent tyrosine phosphorylation of PKM, inhibiting PKM-dependent lactate production,
	glucose metabolism, and cell growth (PubMed:25263439). {ECO:0000269 PubMed:25263439
	ECO:0000269 PubMed:25907537, ECO:0000269 PubMed:32562145}.
Molecular Weight:	56.5 kDa
UniProt:	Q9UPQ4
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studie
	as well. As the protein has not been tested for functional studies yet we cannot offer a

Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C

Expiry Date: Unlimited (if stored properly)

Store at -80°C.
