

## Datasheet for ABIN3074989 USP17L17 Protein (AA 1-530) (Strep Tag)

Overview

Quantity:	250 µg
Target:	USP17L17
Protein Characteristics:	AA 1-530
Origin:	Human
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This USP17L17 protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)

## Product Details

Brand:	AliCE®
Sequence:	MEDDSLYLGG EWQFNHFSKL TSSRPDAAFA EIQRTSLPEK SPLSCETRVD LCDDLAPVAR
	QLAPREKLPL SSRRPAAVGA GLQNMGNTCY VNASLQCLTY TPPLANYMLS REHSQTCHRH

	have a special request, please contact us.
Characteristics:	Key Benefits:
	<ul> <li>Made in Germany - from design to production - by highly experienced protein experts.</li> <li>Protein expressed with ALiCE® and purified in one-step affinity chromatography</li> <li>These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).</li> <li>State-of-the-art algorithm used for plasmid design (Gene synthesis).</li> </ul>
	This protein is a <b>made-to-order protein</b> and will be made for the first time for your order. Our
	experts in the lab try to ensure that you receive soluble protein.
	The big advantage of ordering our <b>made-to-order proteins</b> in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.
	Expression System:
	<ul> <li>ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.</li> <li>During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!</li> </ul>
	Concentration:
	<ul> <li>The concentration of our recombinant proteins is measured using the absorbance at 280nm</li> <li>The protein's absorbance will be measured against its specific reference buffer.</li> <li>We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.</li> </ul>
Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made

Alternative Name:     USP17L17       Background:     Ubiquitin carboxyl terminal hydrolase 17-like protein 17 (EC 3.4.19.12) FUNCTION: Deubiquitinating enzyme that removes conjugated ubiquitin from specific proteins to regulate different cellular processes that may include cell proliferation, progression through the cell cycle, apoptosis, cell migration, and the cellular response to viral infection. (ECO.0000250)       Molecular Weight:     59.6 kDa       Application Details     59.6 kDa       Application Details     In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.       Comment:     ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.       During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein steps, the additional components needed for protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production fund easing only the protein steps, the additional components needed for protein production for burdues something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!       Restrictions:     For Research Use only       Handling       Format:     Liguid	Target Details	
Background:       Ubiquitin carboxyHerminal hydrolase 17-like protein 17 (EC 3.4.19.12)/FUNCTION: Deubiquitinating enzyme that removes conjugated ubiquitin from specific proteins to regulate different cellular processes that may include cell proliferation, progression through the cell cycle, apoptosis, cell migration, and the cellular response to viral infection. (ECO.0000250).         Molecular Weight:       59.6 kDa         Application Details       D6R806         Application Notes:       In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.         Comment:       ALICER9, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotana tabacum c.v. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.         During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reactor. During only state completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!         Restrictions:       For Research Use only         Handling       The buffer composition is at the discretion of the manufacturer. Standard Storage Buffer: PBS pH 7.4, 10 % Clycerol Might differ depending on protein. <th>Target:</th> <th>USP17L17</th>	Target:	USP17L17
