# Datasheet for ABIN3075102 UBL4A Protein (AA 1-157) (Strep Tag)

### Overview

Quantity:	1 mg
Target:	UBL4A
Protein Characteristics:	AA 1-157
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This UBL4A protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)

### Product Details

Sequence:	MQLTVKALQG RECSLQVPED ELVSTLKQLV SEKLNVPVRQ QRLLFKGKAL ADGKRLSDYS
	IGPNSKLNLV VKPLEKVLLE EGEAQRLADS PPPQVWQLIS KVLARHFSAA DASRVLEQLQ
	RDYERSLSRL TLDDIERLAS RFLHPEVTET MEKGFSK
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	Made in Germany - from design to production - by highly experienced protein experts.
	Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure
	correct folding and modification.
	These proteins are normally active (enzymatically functional) as our customers have
	reported (not tested by us and not guaranteed).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

#### Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
  protein production are removed, leaving only the protein production machinery and the
  mitochondria to drive the reaction. During our lysate completion steps, the additional
  components needed for protein production (amino acids, cofactors, etc.) are added to
  produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

#### Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):
	<ol> <li>In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.</li> <li>Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.</li> </ol>
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade

Target Details	
Target:	UBL4A
Alternative Name:	UBL4A (UBL4A Products)
Background:	Ubiquitin-like protein 4A (Ubiquitin-like protein GDX),FUNCTION: As part of a cytosolic protein
	quality control complex, the BAG6/BAT3 complex, maintains misfolded and hydrophobic
	patches-containing proteins in a soluble state and participates in their proper delivery to the
	endoplasmic reticulum or alternatively can promote their sorting to the proteasome where they
	undergo degradation (PubMed:20676083, PubMed:21636303, PubMed:21743475,
	PubMed:28104892). The BAG6/BAT3 complex is involved in the post-translational delivery of
	tail-anchored/type II transmembrane proteins to the endoplasmic reticulum membrane.
	Recruited to ribosomes, it interacts with the transmembrane region of newly synthesized tail-
	anchored proteins and together with SGTA and ASNA1 mediates their delivery to the
	endoplasmic reticulum (PubMed:20676083, PubMed:28104892, PubMed:25535373). Client
	proteins that cannot be properly delivered to the endoplasmic reticulum are ubiquitinated and
	sorted to the proteasome (PubMed:28104892). Similarly, the BAG6/BAT3 complex also
	functions as a sorting platform for proteins of the secretory pathway that are mislocalized to
	the cytosol either delivering them to the proteasome for degradation or to the endoplasmic
	reticulum (PubMed:21743475). The BAG6/BAT3 complex also plays a role in the endoplasmic
	reticulum-associated degradation (ERAD), a quality control mechanism that eliminates
	unwanted proteins of the endoplasmic reticulum through their retrotranslocation to the cytosol
	and their targeting to the proteasome. It maintains these retrotranslocated proteins in an
	unfolded yet soluble state condition in the cytosol to ensure their proper delivery to the
	proteasome (PubMed:21636303). {ECO:0000269 PubMed:20676083,
	EC0:0000269 PubMed:21636303, EC0:0000269 PubMed:21743475,
	ECO:0000269 PubMed:25535373, ECO:0000269 PubMed:28104892}.
Molecular Weight:	17.8 kDa
UniProt:	P11441
Pathways:	Ubiquitin Proteasome Pathway
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.

For Research Use only

# Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
