_					
U	V	er	VI	е	W

Overview			
Quantity:	1 mg		
Target:	UBE2L3		
Protein Characteristics:	AA 1-154		
Origin:	Human		
Source:	Tobacco (Nicotiana tabacum)		
Protein Type:	Recombinant		
Purification tag / Conjugate:	This UBE2L3 protein is labelled with Strep Tag.		
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA		
Product Details			
Sequence:	MAASRRLMKE LEEIRKCGMK NFRNIQVDEA NLLTWQGLIV PDNPPYDKGA FRIEINFPAE		
	YPFKPPKITF KTKIYHPNID EKGQVCLPVI SAENWKPATK TDQVIQSLIA LVNDPQPEHP		
	LRADLAEEYS KDRKKFCKNA EEFTKKYGEK RPVD		
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression		
	system, a different complexity of the protein could make another tag necessary. In case you		
	have a special request, please contact us.		
Characteristics:	Key Benefits:		
	Made in Germany - from design to production - by highly experienced protein experts.		
	Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure

reported (not tested by us and not guaranteed).

· These proteins are normally active (enzymatically functional) as our customers have

correct folding and modification.

• State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System		
	(ALiCE®):		
	 In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot. 		
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.		
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)		
Grade:	Crystallography grade		

Target Details

Target:	UBE2L3	
Alternative Name:	UBE2L3 (UBE2L3 Products)	
Background:	Ubiquitin-conjugating enzyme E2 L3 (EC 2.3.2.23) (E2 ubiquitin-conjugating enzyme L3) (L-UBC	
	(UbcH7) (Ubiquitin carrier protein L3) (Ubiquitin-conjugating enzyme E2-F1) (Ubiquitin-protein	
	ligase L3),FUNCTION: Ubiquitin-conjugating enzyme E2 that specifically acts with HECT-type	
	and RBR family E3 ubiquitin-protein ligases. Does not function with most RING-containing E3	
	ubiquitin-protein ligases because it lacks intrinsic E3-independent reactivity with lysine: in	
	contrast, it has activity with the RBR family E3 enzymes, such as PRKN, RNF31 and ARIH1, that	
	function like RING-HECT hybrids. Accepts ubiquitin from the E1 complex and catalyzes its	
	covalent attachment to other proteins. In vitro catalyzes 'Lys-11'-linked polyubiquitination.	
	Involved in the selective degradation of short-lived and abnormal proteins. Down-regulated	
	during the S-phase it is involved in progression through the cell cycle. Regulates nuclear	
	hormone receptors transcriptional activity. May play a role in myelopoiesis.

	ECO:0000269 PubMed:21532592, ECO:0000269 PubMed:35294289}.	
Molecular Weight:	17.9 kDa	
UniProt:	P68036	
Application Details		
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies	
	as well. As the protein has not been tested for functional studies yet we cannot offer a	
	guarantee though.	
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from	
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce	
	even the most difficult-to-express proteins, including those that require post-translational	
	modifications.	
	During lysate production, the cell wall and other cellular components that are not required for	
	protein production are removed, leaving only the protein production machinery and the	
	mitochondria to drive the reaction. During our lysate completion steps, the additional	
	components needed for protein production (amino acids, cofactors, etc.) are added to produce	

Application Details

	needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
