VAMP7 Protein (AA 2-188) (His tag)

Overview Quantity: 1 mg Target: VAMP7 Protein Characteristics: AA 2-188 Origin: Human Source: Escherichia coli (E. coli) Protein Type: Recombinant Purification tag / Conjugate: This VAMP7 protein is labelled with His tag. ELISA, SDS-PAGE (SDS), Western Blotting (WB), Crystallization (Crys) Application: **Product Details**

	special request, please contact us.
	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a

Sequence:	AILFAVVARG TTILAKHAWC GGNFLEVTEQ ILAKIPSENN KLTYSHGNYL FHYICQDRIV

Characteristics:

- Made in Germany from design to production by highly experienced protein experts.
- Human VAMP7 Protein (raised in E. Coli) purified by multi-step, protein-specific process to ensure crystallization grade.
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made to order protein and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

In the unlikely event that the protein cannot be expressed or purified we do not charge anything (other companies might charge you for any performed steps in the expression process for custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression experiments or purification optimization).

When you order this made-to-order protein you will only pay upon receival of the correctly folded protein. With no financial risk on your end you can rest assured that our experienced protein experts will do everything to make sure that you receive the protein you ordered. The concentration of our recombinant proteins is measured using the absorbance at 280nm.

The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.

The concentration of the protein is calculated using its specific absorption coefficient. We use the Expasy's protparam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in bacterial culture:

- In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
- 2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Purity:

>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

Sterility:

0.22 µm filtered

Endotoxin Level:

Endotoxin has not been removed. Please contact us if you require endotoxin removal.

Grade:

Crystallography grade

Target Details

Target:	VAMP7
Alternative Name:	VAMP7 (VAMP7 Products)
Background:	Involved in the targeting and/or fusion of transport vesicles to their target membrane during
	transport of proteins from the early endosome to the lysosome. Required for heterotypic fusion
	of late endosomes with lysosomes and homotypic lysosomal fusion. Required for calcium

regulated lysosomal exocytosis. Involved in the export of chylomicrons from the endoplasmic		
reticulum to the cis Golgi. Required for exocytosis of mediators during eosinophil and		
neutrophil degranulation, and target cell killing by natural killer cells. Required for focal		
exocytosis of late endocytic vesicles during phagosome formation.

ECO:0000269 PubMed:18042464}.		

Molecular Weight:

22.2 kDa Including tag.

UniProt:

P51809

Application Details

	guarantee though.
	as well. As the protein has not been tested for functional studies yet we cannot offer a
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies

Comment:

In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.

Restrictions:

For Research Use only

Handling

Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
