SPEF1 Protein (AA 1-236) (Strep Tag)

Overview

Quantity:	1 mg
Target:	SPEF1
Protein Characteristics:	AA 1-236
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This SPEF1 protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)

Product Details

Sequence:

MASSVDEEAL HQLYLWVDNI PLSRPKRNLS RDFSDGVLVA EVIKFYFPKM VEMHNYVPAN SLQQKLSNWG HLNRKVLKRL NFSVPDDVMR KIAQCAPGVV ELVLIPLRQR LEERQRRRKQ GAGSLQELAP QDGSGYMDVG VSQKARGEGV PDPQGGGQLS WDRPPAPRPP AYNRALQGDP SFVLQIAEKE QELLASQETV QVLQMKVRRL EHLLQLKNVR IEDLSRRLQQ AERKQR

Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

Characteristics:

Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure correct folding and modification.
- · These proteins are normally active (enzymatically functional) as our customers have

reported (not tested by us and not guaranteed).

• State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- · We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):

- 1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
- Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Purity:

>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

Endotoxin Level:

Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)

Target Details

Target:	SPEF1
Alternative Name:	SPEF1 (SPEF1 Products)
Background:	Sperm flagellar protein 1,FUNCTION: Microtubule-associated protein involved in the
	stabilization of microtubules along the axis of migration during radial intercalation. Promotes
	the establishment and stabilization of an axis of microtubules required for the active migration
	of cells into the outer epithelium (By similarity). Microtubule-associated protein that promotes
	microtubule bundling and stabilizes microtubules against depolymerization in response to colo
	shock (By similarity). Essential for ciliary central apparatus formation which requires both its
	microtubule-binding and bundling activities and for ciliary localization of HYDIN and SPAG6 in
	ependymal cilia (By similarity). Binds actin in intestinal epithelial cells (IECs), essential for IECs
	survival and contributes to formation of filopodia and lamellipodia in migrating IECs
	(PubMed:31473225). Regulates planar cell polarity signaling pathway and asymmetric
	microtubule accumulation in ciliated epithelia (By similarity). {ECO:0000250 UniProtKB:Q0IH24
	ECO:0000250 UniProtKB:Q99JL1, ECO:0000269 PubMed:31473225}.
Molecular Weight:	27.0 kDa
JniProt:	Q9Y4P9
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational
	modifications.
	During lysate production, the cell wall and other cellular components that are not required for
	protein production are removed, leaving only the protein production machinery and the
	mitochondria to drive the reaction. During our lysate completion steps, the additional
	components needed for protein production (amino acids, cofactors, etc.) are added to produce
	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
