Datasheet for ABIN3078759 DEDD2 Protein (AA 1-326) (Strep Tag)

Overview

Quantity:	1 mg
Target:	DEDD2
Protein Characteristics:	AA 1-326
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This DEDD2 protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

Product Details

Sequence:	MALSGSTPAP CWEEDECLDY YGMLSLHRMF EVVGGQLTEC ELELLAFLLD EAPGAAGGLA
	RARSGLELLL ELERRGQCDE SNLRLLGQLL RVLARHDLLP HLARKRRRPV SPERYSYGTS
	SSSKRTEGSC RRRRQSSSSA NSQQGQWETG SPPTKRQRRS RGRPSGGARR RRRGAPAAPQ
	QQSEPARPSS EGKVTCDIRL RVRAEYCEHG PALEQGVASR RPQALARQLD VFGQATAVLR
	SRDLGSVVCD IKFSELSYLD AFWGDYLSGA LLQALRGVFL TEALREAVGR EAVRLLVSVD
	EADYEAGRRR LLLMEEEGGR RPTEAS
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	• Made in Germany - from design to production - by highly experienced protein experts.
	Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure

- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein. The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System
	(ALICE®):
	 In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
	 Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

Product Details	
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade

Target Details

DD2 (DEDD2 Products) A-binding death effector domain-containing protein 2 (DED-containing protein FLAME-3) ADD-like anti-apoptotic molecule 3),FUNCTION: May play a critical role in death receptor- luced apoptosis and may target CASP8 and CASP10 to the nucleus. May regulate gradation of intermediate filaments during apoptosis. May play a role in the general nscription machinery in the nucleus and might be an important regulator of the activity of F3C3. 2 kDa

May regulate gradation of intermediate filaments during apoptosis. May play a role in the general inscription machinery in the nucleus and might be an important regulator of the activity of F3C3. 2 kDa
WXF8
addition to the applications listed above we expect the protein to work for functional studies well. As the protein has not been tested for functional studies yet we cannot offer a arantee though.
iCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from cotiana tabacum c.v This contains all the protein expression machinery needed to produce en the most difficult-to-express proteins, including those that require post-translational odifications. ring lysate production, the cell wall and other cellular components that are not required for otein production are removed, leaving only the protein production machinery and the tochondria to drive the reaction. During our lysate completion steps, the additional mponents needed for protein production (amino acids, cofactors, etc.) are added to produce mething that functions like a cell, but without the constraints of a living system - all that's
i e r

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
