

Datasheet for ABIN3079301 EID3 Protein (AA 1-333) (Strep Tag)

Overview

Quantity:	1 mg
Target:	EID3
Protein Characteristics:	AA 1-333
Origin:	Human
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This EID3 protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

Product Details

Brand:	AliCE®
Sequence:	MKMDVSVRAA GCSDDLSSGE ADVDPKLLEL TADEEKCRSI RRQYRQLMYC VRQNREDIVS
	SANNSLTEAL EEANVLFDGV SRTREAALDA RFLVMASDLG KEKAKQLNSD MNFFNQLAFC
	DFLFLFVGLN WMEGDPDKLS DCDDSIALSF WKAIEKEATS WMVKAETFHF VFGSFKLERS
	APKPRLEHQK KVRKMEENGN MPTKLQKLDL SSYPEATEKN VERILGLLQT YFRKYPDTPV
	SYFEFVIDPN SFSRTVENIF YVSFIVRDGF ARIRLDEDRL PILEPMNVNQ MGEGNDSSCH
	GRKQGVISLT LQEWKNIVAA FEISEAMITY SSY
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- · Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made
Target Details	
Target:	EID3

Alternative Name:	EID3 (EID3 Products)
Background:	EP300-interacting inhibitor of differentiation 3 (EID-3) (E1A-like inhibitor of differentiation 3)
5	(EID-1-like inhibitor of differentiation 3) (Non-structural maintenance of chromosomes element
	4 homolog B) (NS4EB) (Non-SMC element 4 homolog B),FUNCTION: Tissue-specific
	component of the SMC5-SMC6 complex, a complex involved in repair of DNA double-strand
	breaks by homologous recombination. The complex may promote sister chromatid
	homologous recombination by recruiting the SMC1-SMC3 cohesin complex to double-strand
	breaks. The complex is required for telomere maintenance via recombination and mediates
	sumoylation of shelterin complex (telosome) components. {ECO:0000269 PubMed:15987788}.
	FUNCTION: Acts as a repressor of nuclear receptor-dependent transcription possibly by
	interfering with CREBBP-dependent coactivation. May function as a coinhibitor of other
	CREBBP/EP300-dependent transcription factors. {ECO:0000269 PubMed:15987788}.
Molecular Weight:	38.2 kDa
UniProt:	Q8N140

Buffer:	The buffer composition is at the discretion of the manufacturer. Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol Might differ depending on protein.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	12 months
