

Datasheet for ABIN3079352 EFCAB9 Protein (AA 1-197) (Strep Tag)

Overview

Quantity:	250 µg
Target:	EFCAB9
Protein Characteristics:	AA 1-197
Origin:	Human
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This EFCAB9 protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)

Product Details

Brand:	AliCE®		
Sequence:	MRLKQGSFLW YLYLDKIYCL LSVRNVKALA EYFHILDVHG KNTLNDVLFY HFLHHVTDLK		
	KAQINIVFDM LDWNAVGEID FEKFYMLVCM LLAHQNHLEG QFMYRHSRPV FDLLDLKGDL		
	RIGAKNFEMY RFLFNIQKQE LKDLFRDFDI TGDNRLNYQE FKLYTIIYTD KLQKRQKTEE		
	KEKGERKRSL YSKCHIK

• State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made

Target Details

Target:	EFCAB9
Alternative Name:	EFCAB9 (EFCAB9 Products)
Background:	EF-hand calcium-binding domain-containing protein 9,FUNCTION: Auxiliary component of the

	sensor required to activate the CatSper channel. Sperm cell hyperactivation is needed for		
	sperm motility which is essential late in the preparation of sperm for fertilization. Associates		
	with the CatSper complex via direct interaction with CATSPERZ, and senses intracellular		
	Ca(2+). Together with CATSPERZ, associates with the CatSper channel pore and is required for		
	the two-row structure of each single CatSper channel. {ECO:0000250 UniProtKB:Q9DAM2}.		
Molecular Weight:	23.9 kDa		
UniProt:	A8MZ26		
Application Details			
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies		
	as well. As the protein has not been tested for functional studies yet we cannot offer a		
	guarantee though.		
Comment:	$\operatorname{ALiCE}_{\operatorname{I\!B}}$, our Almost Living Cell-Free Expression System is based on a lysate obtained from		
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce		
	even the most difficult-to-express proteins, including those that require post-translational		
	modifications.		
	During lysate production, the cell wall and other cellular components that are not required for		
	protein production are removed, leaving only the protein production machinery and the		
	mitochondria to drive the reaction. During our lysate completion steps, the additional		
	components needed for protein production (amino acids, cofactors, etc.) are added to produce		
	something that functions like a cell, but without the constraints of a living system - all that's		
	needed is the DNA that codes for the desired protein!		
Restrictions:	For Research Use only		
Handling			
Format:	Liquid		
Buffer:	The buffer composition is at the discretion of the manufacturer.		
	Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol Might differ depending on protein.		
Handling Advice:	Avoid repeated freeze-thaw cycles.		
Storage:	-3° 08-		
Storage Comment:	Store at -80°C.
