	•	1 mg
Protein Characteristics: AA 1-138 Origin: Human Source: Cell-free protein synthesis (CFPS) Protein Type: Recombinant Purification tag / Conjugate: This FER1L6-AS1 protein is labelled with Strep Tag. Application: ELISA, SDS-PAGE (SDS), Western Blotting (WB) Product Details Brand: AliCE® Sequence: MDILPYLHMS HGKCPLLVRG KGEMEGEALL SCLAMNSLGE QEACLDLGSK TR	-	
Origin: Human Source: Cell-free protein synthesis (CFPS) Protein Type: Recombinant Purification tag / Conjugate: This FER1L6-AS1 protein is labelled with Strep Tag. Application: ELISA, SDS-PAGE (SDS), Western Blotting (WB) Product Details Brand: AliCE® Sequence: MDILPYLHMS HGKCPLLVRG KGEMEGEALL SCLAMNSLGE QEACLDLGSK TR	larget:	FER1L6-AS1
Source: Cell-free protein synthesis (CFPS) Protein Type: Recombinant Purification tag / Conjugate: This FER1L6-AS1 protein is labelled with Strep Tag. Application: ELISA, SDS-PAGE (SDS), Western Blotting (WB) Product Details Brand: AliCE® Sequence: MDILPYLHMS HGKCPLLVRG KGEMEGEALL SCLAMNSLGE QEACLDLGSK TR	Protein Characteristics:	AA 1-138
Protein Type: Recombinant Purification tag / Conjugate: This FER1L6-AS1 protein is labelled with Strep Tag. Application: ELISA, SDS-PAGE (SDS), Western Blotting (WB) Product Details Brand: AliCE® Sequence: MDILPYLHMS HGKCPLLVRG KGEMEGEALL SCLAMNSLGE QEACLDLGSK TR	Origin:	Human

have a special request, please contact us.	Characteristics:	Key Benefits:
		Made in Germany - from design to production - by highly experienced protein experts.

• State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made
Target Details	
Target:	FER1L6-AS1
Alternative Name:	FER1L6-AS1
Background:	Putative uncharacterized protein FER1L6-AS1 (FER1L6 antisense RNA 1) (FER1L6 antisense
	gene protein 1)

Target Details

Molecular Weight:	15.2 kDa
UniProt:	Q8NA97

Application Details

Comment:

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.

ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.

During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!

Restrictions: For Research Use only

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol Might differ depending on protein.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	12 months
