Datasheet for ABIN3080593 ARHGDIG Protein (AA 1-225) (Strep Tag)

-online.com antibodies

\sim			
()	/er	VIE	/٧/د
\cup		V I C	, v v

Quantity:	1 mg	
Target:	ARHGDIG	
Protein Characteristics:	AA 1-225	
Origin:	Human	
Source:	Tobacco (Nicotiana tabacum)	
Protein Type:	Recombinant	
Purification tag / Conjugate:	This ARHGDIG protein is labelled with Strep Tag.	
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)	
Product Details		
Sequence:	MLGLDACELG AQLLELLRLA LCARVLLADK EGGPPAVDEV LDEAVPEYRA PGRKSLLEIR	
	QLDPDDRSLA KYKRVLLGPL PPAVDPSLPN VQVTRLTLLS EQAPGPVVMD LTGDLAVLKD	
	QVFVLKEGVD YRVKISFKVH REIVSGLKCL HHTYRRGLRV DKTVYMVGSY GPSAQEYEFV	
	TPVEEAPRGA LVRGPYLVVS LFTDDDRTHH LSWEWGLCIC QDWKD	
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression	
	system, a different complexity of the protein could make another tag necessary. In case you	
	have a special request, please contact us.	
Characteristics:	Key Benefits:	
	Made in Germany - from design to production - by highly experienced protein experts.	
	Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure	
	correct folding and modification.	
	These proteins are normally active (enzymatically functional) as our customers have

• State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

• ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.

During lysate production, the cell wall and other cellular components that are not required for
protein production are removed, leaving only the protein production machinery and the
mitochondria to drive the reaction. During our lysate completion steps, the additional
components needed for protein production (amino acids, cofactors, etc.) are added to
produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System
	(ALiCE®):
	1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag
	capture material. Eluate fractions are analyzed by SDS-PAGE.
	2. Protein containing fractions of the best purification are subjected to second purification step
	through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and
	Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)

Target Details

Target:	ARHGDIG	
Alternative Name:	ARHGDIG (ARHGDIG Products)	
Background:	Rho GDP-dissociation inhibitor 3 (Rho GDI 3) (Rho-GDI gamma),FUNCTION: Inhibits GDP/GTP exchange reaction of RhoB. Interacts specifically with the GDP- and GTP-bound forms of post-translationally processed Rhob and Rhog proteins, both of which show a growth-regulated expression in mammalian cells. Stimulates the release of the GDP-bound but not the GTP-bound RhoB protein. Also inhibits the GDP/GTP exchange of RhoB but shows less ability to inhibit the dissociation of prebound GTP.	
Molecular Weight:	25.1 kDa	
UniProt:	Q99819	
Application Details		
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.	
Comment:	 ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications. During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein! 	
Restrictions:	For Research Use only	
Handling		
Format:	Liquid	
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.	
Handling Advice:	Avoid repeated freeze-thaw cycles.
