

# Datasheet for ABIN3082718 KRTAP10-10 Protein (AA 1-251) (Strep Tag)

Overview

Quantity:	1 mg
Target:	KRTAP10-10
Protein Characteristics:	AA 1-251
Origin:	Human
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This KRTAP10-10 protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)

# Product Details

Brand:	AliCE®
Sequence:	MAASTMSICS SACTDSWRVV DCPESCCEPC CCAPAPSLTL VCTPVSCVSS PCCQTACEPS
	ACQSGYTSSC TTPCYQQSSC QPDCCTSSPC QQACCVPVCC VPVCCVPVCN KPVCFVPTCS
	ESSPSCCQQS SCQPTCCTSS PCQQACCVPV CSKSVCYVPV CSGASTSCCQ QSSCQPACCT
	ASCCRPSSSV SLLCHPVCKS TCCVPVPSCG ASASSCQPSC CRTASCVSLL CRPVCSRPAC
	YSLCSGQKSS C
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	Made in Germany - from design to production - by highly experienced protein experts.

- Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

#### Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
  protein production are removed, leaving only the protein production machinery and the
  mitochondria to drive the reaction. During our lysate completion steps, the additional
  components needed for protein production (amino acids, cofactors, etc.) are added to
  produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

#### Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made

## Target Details

Target:	KRTAP10-10
Alternative Name:	KRTAP10-10

Target Details	
----------------	--

Background:	Keratin-associated protein 10-10 (High sulfur keratin-associated protein 10.10) (Keratin-
	associated protein 10.10) (Keratin-associated protein 18-10) (Keratin-associated protein
	18.10),FUNCTION: In the hair cortex, hair keratin intermediate filaments are embedded in an
	interfilamentous matrix, consisting of hair keratin-associated proteins (KRTAP), which are
	essential for the formation of a rigid and resistant hair shaft through their extensive disulfide
	bond cross-linking with abundant cysteine residues of hair keratins. The matrix proteins include
	the high-sulfur and high-glycine-tyrosine keratins.
Molecular Weight:	25.6 kDa
UniProt:	P60014
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicotiana tabacum c.v. This contains all the protein expression machinery needed to produce

Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.

During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. For Research Use only

### Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol <b>Might differ depending on protein.</b>
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
