# Datasheet for ABIN3083550 MAF1 Protein (AA 1-256) (Strep Tag)

### Overview

Quantity:	1 mg
Target:	MAF1
Protein Characteristics:	AA 1-256
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This MAF1 protein is labelled with Strep Tag.
Application:	SDS-PAGE (SDS), ELISA, Western Blotting (WB)

## Product Details

Sequence:	MKLLENSSFE AINSQLTVET GDAHIIGRIE SYSCKMAGDD KHMFKQFCQE GQPHVLEALS
	PPQTSGLSPS RLSKSQGGEE EGPLSDKCSR KTLFYLIATL NESFRPDYDF STARSHEFSR
	EPSLSWVVNA VNCSLFSAVR EDFKDLKPQL WNAVDEEICL AECDIYSYNP DLDSDPFGED
	GSLWSFNYFF YNKRLKRIVF FSCRSISGST YTPSEAGNEL DMELGEEEVE EESRSGGSGA
	EETSTMEEDR VPVICI
	Sequence without tag. The proposed Strep-Tag is based on experience $\ensuremath{s}$ with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a analial request places contact up
	nave a special request, please contact us.
Characteristics:	Key Benefits:

- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein. The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

#### Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
  protein production are removed, leaving only the protein production machinery and the
  mitochondria to drive the reaction. During our lysate completion steps, the additional
  components needed for protein production (amino acids, cofactors, etc.) are added to
  produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

#### Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):
	<ol> <li>In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.</li> <li>Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.</li> </ol>
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)

### Product Details

Grade:

Crystallography grade

## Target Details

Target:	MAF1
Alternative Name:	MAF1 (MAF1 Products)
Background:	Repressor of RNA polymerase III transcription MAF1 homolog,FUNCTION: Plays a role in the
	repression of RNA polymerase III-mediated transcription in response to changing nutritional,
	environmental and cellular stress conditions to balance the production of highly abundant
	tRNAs, 5S rRNA, and other small non-coding RNAs with cell growth and maintenance
	(PubMed:18377933, PubMed:20233713, PubMed:20516213, PubMed:20543138). Also plays a
	key role in cell fate determination by promoting mesorderm induction and adipocyte
	differentiation (By similarity). Mechanistically, associates with the RNA polymerase III clamp
	and thereby impairs its recruitment to the complex made of the promoter DNA, TBP and the
	initiation factor TFIIIB (PubMed:20887893, PubMed:17505538). When nutrients are available
	and mTOR kinase is active, MAF1 is hyperphosphorylated and RNA polymerase III is engaged in
	transcription. Stress-induced MAF1 dephosphorylation results in nuclear localization, increased
	targeting of gene-bound RNA polymerase III and a decrease in the transcriptional readout
	(PubMed:26941251). Additionally, may also regulate RNA polymerase I and RNA polymerase II-
	dependent transcription through its ability to regulate expression of the central initiation factor
	TBP (PubMed:17499043). {ECO:0000250 UniProtKB:Q9D0U6, ECO:0000269 PubMed:17499043,
	ECO:0000269 PubMed:17505538, ECO:0000269 PubMed:18377933,
	ECO:0000269 PubMed:20233713, ECO:0000269 PubMed:20516213,
	ECO:0000269 PubMed:20543138, ECO:0000269 PubMed:20887893,
	ECO:0000269 PubMed:26941251}.
Molecular Weight:	28.8 kDa
UniProt:	Q9H063
Application Details	
Application Notes	In addition to the applications listed above we expect the protein to work for functional studies

	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.

	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request,
	please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
