antibodies

Datasheet for ABIN3083636 MEMO1 Protein (AA 1-297) (Strep Tag)

Overview

Quantity:	1 mg
Target:	MEM01
Protein Characteristics:	AA 1-297
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This MEMO1 protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)

Product Details

Sequence:	MSNRVVCREA SHAGSWYTAS GPQLNAQLEG WLSQVQSTKR PARAIIAPHA GYTYCGSCAA
	HAYKQVDPSI TRRIFILGPS HHVPLSRCAL SSVDIYRTPL YDLRIDQKIY GELWKTGMFE
	RMSLQTDEDE HSIEMHLPYT AKAMESHKDE FTIIPVLVGA LSESKEQEFG KLFSKYLADP
	SNLFVVSSDF CHWGQRFRYS YYDESQGEIY RSIEHLDKMG MSIIEQLDPV SFSNYLKKYH
	NTICGRHPIG VLLNAITELQ KNGMNMSFSF LNYAQSSQCR NWQDSSVSYA AGALTVH
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
Characteristics:	Key Benefits:Made in Germany - from design to production - by highly experienced protein experts.

- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein. The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):
	 In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)

Product Details

Grade:

Crystallography grade

Target Details

Target:	MEM01
Alternative Name:	MEMO1 (MEMO1 Products)
Background:	Protein MEMO1 (C21orf19-like protein) (Hepatitis C virus NS5A-transactivated protein 7) (HCV
	NS5A-transactivated protein 7) (Mediator of ErbB2-driven cell motility 1) (Mediator of cell
	motility 1) (Memo-1),FUNCTION: May control cell migration by relaying extracellular
	chemotactic signals to the microtubule cytoskeleton. Mediator of ERBB2 signaling. The
	MEM01-RH0A-DIAPH1 signaling pathway plays an important role in ERBB2-dependent
	stabilization of microtubules at the cell cortex. It controls the localization of APC and CLASP2 t
	the cell membrane, via the regulation of GSK3B activity. In turn, membrane-bound APC allows
	the localization of the MACF1 to the cell membrane, which is required for microtubule capture
	and stabilization. Is required for breast carcinoma cell migration.
	{ECO:0000269 PubMed:15156151, ECO:0000269 PubMed:20937854}.
Molecular Weight:	33.7 kDa
UniProt:	Q9Y316
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational
	modifications.
	During lysate production, the cell wall and other cellular components that are not required for
	protein production are removed, leaving only the protein production machinery and the
	mitochondria to drive the reaction. During our lysate completion steps, the additional
	components needed for protein production (amino acids, cofactors, etc.) are added to produce
	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
