

Datasheet for ABIN3084015

MPHOSPH10 Protein (AA 1-681) (Strep Tag)

[Go to Product page](#)

Overview

Quantity:	250 µg
Target:	MPHOSPH10
Protein Characteristics:	AA 1-681
Origin:	Human
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This MPHOSPH10 protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)

Product Details

Brand:	AlIcE®
Sequence:	<p>MAPQVWRRRT LERCLTEVGK ATGRPECFLT IQEGLASKFT SLTKVLYDFN KILENGRIHG</p> <p>SPLQKLVIEN FDDEQIWQQL ELQNEPILQY FQNAVSETIN DEDISLLPES EEQEREEDGS</p> <p>EIEADDKEDL EDLEEEVSD MGNDDPEMGE RAENSSKSDL RKSPVFSDED SLDLDFDISKL</p> <p>EQQSKVQNGK QGKPREKSIV DDKFFKLSEM EAYLENIEKE EERKDDNDEE EEDIDFFEDI</p> <p>DSDEDEGLF GSKKLKSGKS SRNLKYKDFD DPVESDEDIT NVHDELDSDN KEDDEIAEEE</p> <p>AEELSISETD EDDDLQENED NKQHKESEKLR VTFALPDAAE TEDTGVNLVK KNSDEVKSSF</p> <p>EKRQEKMNEK IASLEKELLE KKPWQLQGEV TAQKRPENSL LEETLHFDHA VRMAPVITEE</p> <p>TTLQLEDIIK QRIRDQAWDD VVRKEKPKED AYEYKKRLTL DHEKSKLSLA EIYEQEYIKL</p> <p>NQQKTAEEEN PEHVEIQMM DSLFLKLDAL SNFHFIKPP VPEIKVSNL PAITMEEVAP</p> <p>VSVSDAALLA PEEIKEKNA GDIKTAAEKT ATDKKRERRK KKYQKRMKIK EKEKRRKLL</p> <p>KSSVDQAGKY SKTVASEKLK QLTKTGKASF IKDEGKDKAL KSSQAFFSKL QDQVKMQIND</p>

AKKTEKKKKK RQDISVHKLK L

Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

Characteristics:

Key Benefits:

- Made in Germany - from design to production - by highly experienced protein experts.
- Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from *Nicotiana tabacum* c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the ExPASy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:

One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®).

Product Details

Purity: > 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).

Grade: custom-made

Target Details

Target: MPHOSPH10

Alternative Name: MPHOSPH10 ([MPHOSPH10 Products](#))

Background: U3 small nucleolar ribonucleoprotein protein MPP10 (M phase phosphoprotein 10),FUNCTION: Component of the 60-80S U3 small nucleolar ribonucleoprotein (U3 snoRNP). Required for the early cleavages during pre-18S ribosomal RNA processing (PubMed:12655004). Part of the small subunit (SSU) processome, first precursor of the small eukaryotic ribosomal subunit. During the assembly of the SSU processome in the nucleolus, many ribosome biogenesis factors, an RNA chaperone and ribosomal proteins associate with the nascent pre-rRNA and work in concert to generate RNA folding, modifications, rearrangements and cleavage as well as targeted degradation of pre-ribosomal RNA by the RNA exosome (PubMed:34516797). {ECO:0000269|PubMed:12655004, ECO:0000269|PubMed:34516797}.

Molecular Weight: 78.9 kDa

UniProt: [O00566](#)

Pathways: [SARS-CoV-2 Protein Interactome](#), [The Global Phosphorylation Landscape of SARS-CoV-2 Infection](#)

Application Details

Application Notes: In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.

Comment: ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from *Nicotiana tabacum* c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.

During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce

Application Details

something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!

Restrictions: For Research Use only

Handling

Format: Liquid

Buffer: The buffer composition is at the discretion of the manufacturer.
Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol **Might differ depending on protein.**

Handling Advice: Avoid repeated freeze-thaw cycles.

Storage: -80 °C

Storage Comment: Store at -80°C.

Expiry Date: 12 months
