

Datasheet for ABIN3087380 RNF212 Protein (AA 1-297) (Strep Tag)

Overview

Quantity:	1 mg
Target:	RNF212
Protein Characteristics:	AA 1-297
Origin:	Human
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This RNF212 protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

Product Details

Brand:	AliCE®
Sequence:	MANWVFCNRC FQPPHRTSCF SLTNCGHVYC DACLGKGKKN ECLICKAPCR TVLLSKHTDA
	DIQAFFMSID SLCKKYSRET SQILEFQEKH RKRLLAFYRE KISRLEESLR KSVLQIEQLQ
	SMRSSQQTAF STIKSSVSTK PHGCLLPPHS SAPDRLESME VDLSPSPIRK SEIAAGPARI
	SMISPPQDGR MGPHLTASFC FIPWLTLSKP PVPGECVISR GSPCFCIDVC PHWLLLLAFS
	SGRHGELTNS KTLPIYAEVQ RAVLFPFQQA EGTLDTFRTP AVSVVFPLCQ FERKKSF
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	Made in Germany - from design to production - by highly experienced protein experts.

- Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made

Target Details

Target:	RNF212
Alternative Name:	RNF212 (RNF212 Products)

Target D	Details
----------	---------

Background:	Probable E3 SUMO-protein ligase RNF212 (EC 2.3.2) (Probable E3 SUMO-protein transferase
	RNF212) (RING finger protein 212),FUNCTION: SUMO E3 ligase that acts as a regulator of
	crossing-over during meiosis: required to couple chromosome synapsis to the formation of
	crossover-specific recombination complexes. Localizes to recombination sites and stabilizes
	meiosis-specific recombination factors, such as MutS-gamma complex proteins (MSH4 and
	MSH5) and TEX11. May mediate sumoylation of target proteins MSH4 and/or MSH5, leading to
	enhance their binding to recombination sites. Acts as a limiting factor for crossover designation
	and/or reinforcement and plays an antagonist role with CCNB1IP1/HEI10 in the regulation of
	meiotic recombination (By similarity). {ECO:0000250}.
Molecular Weight:	33.4 kDa
UniProt:	Q495C1
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational modifications.
	During lysate production, the cell wall and other cellular components that are not required for
	protein production are removed, leaving only the protein production machinery and the
	mitochondria to drive the reaction. During our lysate completion steps, the additional
	components needed for protein production (amino acids, cofactors, etc.) are added to produce
	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer.
	Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol Might differ depending on protein.
Handling Advice:	Avoid repeated freeze-thaw cycles.
