MRPL41 Protein (AA 14-137) (His tag)

()	11/0	K\ /	iew
	\cup	'I V/I	$I \cap VV$

OVERVIEW		
Quantity:	1 mg	
Target:	MRPL41	
Protein Characteristics:	AA 14-137	
Origin:	Human	
Source:	Escherichia coli (E. coli)	
Protein Type:	Recombinant	
Purification tag / Conjugate:	This MRPL41 protein is labelled with His tag.	
Application:	ELISA, Western Blotting (WB), Crystallization (Crys), SDS-PAGE (SDS)	
Product Details		
Sequence:	GADRMSKWTS KRGPRSFRGR KGRGAKGIGF LTSGWRFVQI KEMVPEFVVP DLTGFKLKPY	
	VSYLAPESEE TPLTAAQLFS EAVAPAIEKD FKDGTFDPDN LEKYGFEPTQ EGKLFQLYPR NFLR	
	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a	
	special request, please contact us.	
Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Human MRPL41 Protein (raised in E. Coli) purified by multi-step, protein-specific process to ensure crystallization grade. State-of-the-art algorithm used for plasmid design (Gene synthesis). 	
	This protein is a made to order protein and will be made for the first time for your order. Our	
	experts in the lab will ensure that you receive a correctly folded protein.	
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom	
	made proteins from other companies is that there is no financial obligation in case the protein	

cannot be expressed or purified.

In the unlikely event that the protein cannot be expressed or purified we do not charge anything (other companies might charge you for any performed steps in the expression process for custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression experiments or purification optimization).

When you order this made-to-order protein you will only pay upon receival of the correctly folded protein. With no financial risk on your end you can rest assured that our experienced protein experts will do everything to make sure that you receive the protein you ordered. The concentration of our recombinant proteins is measured using the absorbance at 280nm. The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.

The concentration of the protein is calculated using its specific absorption coefficient. We use the Expasy's protparam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in bacterial culture:

- 1. In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
- 2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Purity:

>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

Sterility:

0.22 µm filtered

MRPL41

Endotoxin Level:

Endotoxin has not been removed. Please contact us if you require endotoxin removal.

Grade:

Target:

Crystallography grade

Target Details

Alternative Name:	MRPL41 (MRPL41 Products)	
Background:	Component of the mitochondrial ribosome large subunit. Also involved in apoptosis and cell	
	cycle. Enhances p53/TP53 stability, thereby contributing to p53/TP53-induced apoptosis in	
	response to growth-inhibitory condition. Enhances p53/TP53 translocation to the mitochondria.	
	Has the ability to arrest the cell cycle at the G1 phase, possibly by stabilizing the CDKN1A and	
	CDKN1B (p27Kip1) proteins. {ECO:0000269 PubMed:16024796,	

Target Details

Expiry Date:

Target Details		
	ECO:0000269 PubMed:16256947}.	
Molecular Weight:	15.0 kDa Including tag.	
UniProt:	Q8IXM3	
Pathways:	p53 Signaling	
Application Details		
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.	
Comment:	In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.	
Restrictions:	For Research Use only	
Handling		
Format:	Liquid	
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.	
Handling Advice:	Avoid repeated freeze-thaw cycles.	
Storage:	-80 °C	
Storage Comment:	Store at -80°C.	

Unlimited (if stored properly)
