# Datasheet for ABIN3087566 RPS28 Protein (AA 1-69) (Strep Tag)

#### Overview

Quantity:	1 mg
Target:	RPS28
Protein Characteristics:	AA 1-69
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This RPS28 protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

### Product Details

Sequence:	MDTSRVQPIK LARVTKVLGR TGSQGQCTQV RVEFMDDTSR SIIRNVKGPV REGDVLTLLE
	SEREARRLR
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	Made in Germany - from design to production - by highly experienced protein experts.
	<ul> <li>Protein expressed with ALiCE<sup>®</sup> and purified by multi-step, protein-specific process to ensure correct folding and modification.</li> </ul>
	<ul> <li>These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).</li> </ul>
	State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

#### Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
  protein production are removed, leaving only the protein production machinery and the
  mitochondria to drive the reaction. During our lysate completion steps, the additional
  components needed for protein production (amino acids, cofactors, etc.) are added to
  produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

#### Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):
	1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
	<ol> <li>Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.</li> </ol>
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade

	RPS28
Alternative Name:	RPS28 (RPS28 Products)
Background:	Small ribosomal subunit protein eS28 (40S ribosomal protein S28),FUNCTION: Component of
	the small ribosomal subunit (PubMed:23636399, PubMed:25901680, PubMed:25957688). The
	ribosome is a large ribonucleoprotein complex responsible for the synthesis of proteins in the
	cell (PubMed:23636399, PubMed:25901680, PubMed:25957688). Part of the small subunit
	(SSU) processome, first precursor of the small eukaryotic ribosomal subunit. During the
	assembly of the SSU processome in the nucleolus, many ribosome biogenesis factors, an RNA
	chaperone and ribosomal proteins associate with the nascent pre-rRNA and work in concert to
	generate RNA folding, modifications, rearrangements and cleavage as well as targeted
	degradation of pre-ribosomal RNA by the RNA exosome (PubMed:34516797).
	{ECO:0000269 PubMed:23636399, ECO:0000269 PubMed:25901680,
	EC0:0000269 PubMed:25957688, EC0:0000269 PubMed:34516797}.
Molecular Weight:	7.8 kDa
JniProt:	P62857

## Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
