# Datasheet for ABIN3090042 BATF Protein (AA 1-125) (Strep Tag)

#### Overview

Quantity:	1 mg
Target:	BATF
Protein Characteristics:	AA 1-125
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This BATF protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

## Product Details

Sequence:	MPHSSDSSDS SFSRSPPPGK QDSSDDVRRV QRREKNRIAA QKSRQRQTQK ADTLHLESED
	LEKQNAALRK EIKQLTEELK YFTSVLNSHE PLCSVLAAST PSPPEVVYSA HAFHQPHVSS PRFQP
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	• Made in Germany - from design to production - by highly experienced protein experts.
	<ul> <li>Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure correct folding and modification.</li> </ul>
	<ul> <li>These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).</li> </ul>
	State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

#### Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
  protein production are removed, leaving only the protein production machinery and the
  mitochondria to drive the reaction. During our lysate completion steps, the additional
  components needed for protein production (amino acids, cofactors, etc.) are added to
  produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

#### Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):
	1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
	<ol> <li>Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.</li> </ol>
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade

Target Details	
Target:	BATF
Alternative Name:	BATF (BATF Products)
Background:	Basic leucine zipper transcriptional factor ATF-like (B-cell-activating transcription factor) (B-
	ATF) (SF-HT-activated gene 2 protein) (SFA-2),FUNCTION: AP-1 family transcription factor that
	controls the differentiation of lineage-specific cells in the immune system: specifically mediates
	the differentiation of T-helper 17 cells (Th17), follicular T-helper cells (TfH), CD8(+) dendritic
	cells and class-switch recombination (CSR) in B-cells. Acts via the formation of a heterodimer
	with JUNB that recognizes and binds DNA sequence 5'-TGA[CG]TCA-3'. The BATF-JUNB
	heterodimer also forms a complex with IRF4 (or IRF8) in immune cells, leading to recognition of
	AICE sequence (5'-TGAnTCA/GAAA-3'), an immune-specific regulatory element, followed by
	cooperative binding of BATF and IRF4 (or IRF8) and activation of genes. Controls differentiation
	of T-helper cells producing interleukin-17 (Th17 cells) by binding to Th17-associated gene
	promoters: regulates expression of the transcription factor RORC itself and RORC target genes
	such as IL17 (IL17A or IL17B). Also involved in differentiation of follicular T-helper cells (TfH) by
	directing expression of BCL6 and MAF. In B-cells, involved in class-switch recombination (CSR)
	by controlling the expression of both AICDA and of germline transcripts of the intervening
	heavy-chain region and constant heavy-chain region (I(H)-C(H)). Following infection, can
	participate in CD8(+) dendritic cell differentiation via interaction with IRF4 and IRF8 to mediate
	cooperative gene activation. Regulates effector CD8(+) T-cell differentiation by regulating
	expression of SIRT1. Following DNA damage, part of a differentiation checkpoint that limits
	self-renewal of hematopoietic stem cells (HSCs): up-regulated by STAT3, leading to
	differentiation of HSCs, thereby restricting self-renewal of HSCs (By similarity). {ECO:0000250}.
Molecular Weight:	14.1 kDa
UniProt:	Q16520
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.

modifications.

# Application Details

During lysate production, the cell wall and other cellular components that are not required for
protein production are removed, leaving only the protein production machinery and the
mitochondria to drive the reaction. During our lysate completion steps, the additional
components needed for protein production (amino acids, cofactors, etc.) are added to produce
something that functions like a cell, but without the constraints of a living system - all that's
needed is the DNA that codes for the desired protein!

Restrictions:

For Research Use only

# Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
