Datasheet for ABIN3090691 Cyclin D2 Protein (CCND2) (AA 1-289) (Strep Tag)

Overview

Quantity:	1 mg
Target:	Cyclin D2 (CCND2)
Protein Characteristics:	AA 1-289
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This Cyclin D2 protein is labelled with Strep Tag.
Application:	SDS-PAGE (SDS), Western Blotting (WB), ELISA

Product Details

Sequence:	MELLCHEVDP VRRAVRDRNL LRDDRVLQNL LTIEERYLPQ CSYFKCVQKD IQPYMRRMVA
	TWMLEVCEEQ KCEEEVFPLA MNYLDRFLAG VPTPKSHLQL LGAVCMFLAS KLKETSPLTA
	EKLCIYTDNS IKPQELLEWE LVVLGKLKWN LAAVTPHDFI EHILRKLPQQ REKLSLIRKH

- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein. The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):
	 In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)

Product Details

Grade:

Crystallography grade

Target Details

Target:	Cyclin D2 (CCND2)
Alternative Name:	CCND2 (CCND2 Products)
Background:	G1/S-specific cyclin-D2,FUNCTION: Regulatory component of the cyclin D2-CDK4 (DC) complex
	that phosphorylates and inhibits members of the retinoblastoma (RB) protein family including
	RB1 and regulates the cell-cycle during $G(1)/S$ transition (PubMed:8114739,
	PubMed:18827403). Phosphorylation of RB1 allows dissociation of the transcription factor E2F
	from the RB/E2F complex and the subsequent transcription of E2F target genes which are
	responsible for the progression through the G(1) phase (PubMed:8114739, PubMed:18827403)
	Hypophosphorylates RB1 in early G(1) phase (PubMed:8114739, PubMed:18827403). Cyclin D-
	CDK4 complexes are major integrators of various mitogenenic and antimitogenic signals
	(PubMed:8114739, PubMed:18827403). {ECO:0000269 PubMed:18827403,
	ECO:0000269 PubMed:8114739}.
Molecular Weight:	33.1 kDa
UniProt:	P30279
Pathways:	Cell Division Cycle, Mitotic G1-G1/S Phases
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational
	modifications.
	During lysate production, the cell wall and other cellular components that are not required for
	protein production are removed, leaving only the protein production machinery and the
	mitochondria to drive the reaction. During our lysate completion steps, the additional
	components needed for protein production (amino acids, cofactors, etc.) are added to produce
	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!

Application Details

Restrictions:

For Research Use only

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
